

Mintails | *February 2008*

Mintails owns the rights to process and extract gold, uranium and sulphuric acid from extensive tailings resources located on the West and East Rand regions of South Africa's historic Witwatersrand Basin

Marlow advised Mintails on the formation of a new joint venture with DRDGOLD. The JV acquired significant gold-bearing tailings materials created from historic gold production, as well as ERGO, a surface reclamation operation on South Africa's East Rand which was previously owned and operated by AngloGold Ashanti.
